# At Fresmak INNOVATION is not an option, it is an >> ATTITUDE <<

- Fresmak was founded in 1967 focused on manufacturing **high pressure vices**.
- Nowadays Fresmak has a wide range of clamping solutions and export to over **50 countries worldwide**.
- Its specialization in vices and clamping devices, its team of **highly qualified people**. The latest manufacturing technology and a constant investment in **R & D** has placed Fresmak as a world leader in vice manufacture.
- Above all, Fresmak are **people**. Highly **trained professionals** with a constant attitude to improve and innovate in all processes; from planning right up to implementation at the customers facilities.

## A strategic LOCATION for a fast and efficient service

# VALUES that make us different

## EXPERIENCE

Fresmak is the **first high pressure vice manufacturer** in the world, focused exclusively on clamping solutions.

Through interactive relationships with our customers, Fresmak has acquired a degree of knowledge and experience that guarantees its customers the best solution for clamping their workpieces.

## SPECIALIZATION

Fresmak has a wide and complete range of clamping solutions, both standard and customized.

The company is constantly **investing in R + D + i** and is involved in innovation projects, both nationally and internationally, where it is considered a specialist in clamping.

## SERVICE

Fresmak offers **direct and individual attention** to all its customer.

Fresmak can offer quick and flexible deliveries as **95% of our standard product** range is kept in stock.

**Repair and Maintenance services** are also available.

# KEYS that help Fresmak become a world reference in clamping systems

- Absolute expertise in the product.
- A team of highly qualified and experienced people.
- Latest technology.
- Constant R & D investment.

# VICE AND SPINDLE

## VICE

## SPINDLE

# COMMON FEATURES AND MATERIALS

## Features

Vices are identified by a serial number where their real dimensions are documented, which allows for identical vices to be manufactured.

The main bodies, on their side, have threaded holes for placing adjustable stops and, at the base, two longitudinal and two transverse keyways (20H7).

Keyways are machined and perpendicular to each other which allow for :

- Quick installation on worktables.
- Vices to be perfectly aligned in parallel.

Jaws have a ground surface.

The guides are induction hardened and ground:

- Improves the positioning of the workpiece and the sliding of the moveable jaw.
- Provides hardness.
- Resistant to heavy duty machining, swarf, acids and cutting fluids.

## MATERIALS

Material under a microscope: GGG70 perlitic nodular cast iron.

The main body, the movable jaw and the shoe are produced in GGG70\* perlitic nodular cast iron.

Features of the material:

- Resistance to breakage and fatigue.
- Absorbs vibrations.
- It helps to maintain the geometry of the vices for more than twenty years.

\*IZ and SC vices are made of steel

The jaws of the vices are made from F-5220 (90MnCrV8) steel and hardened at 60HRC.

Features of the material:

- It withstands high pressure without deformation.
- Swarf proof.

# >> HIGH PRESSURE <<

## A technology full of **ADVANTAGES**

### POWER

- Deepercut.
- Higher cutting speed.
- Higher chip removal.

### REPEATABILITY

- Constant clamping force regardless the operator.
- Accuracy of 0.01 mm in clamping repeatability.

### DURABILITY

- The force is carried out by axial movement of the pressure pin, keeping the parts of the vice and the spindle away from wear, extending the life of the vice.

## ADVANTAGES

- > Higher **CLAMPING FORCE**
- > Higher **ACCURACY**
- > Greater **SAVINGS**

video

## RESULTS

- > Increase in **PRODUCTIVITY**
- > **SAVINGS** in costs
- > **QUALITY** improvement
  - > Greater **WORK SAFETY**
  - > Access to **NEW CLIENTS**

# HOW TO CHOOSE A VICE

The following table works as a guide to choose the vice that matches specific needs.

Both the type of piece and manufacturing processes as well as the type of machine should be taking into consideration when choosing a vice.

For further information and election of the vice please contact Fresmak at **fresmak@fresmak.com** or **+34.943.834.250**.

# ARNOLD

High pressure ARNOLD MAT vices maintain their length irrespective of the size of the part, for which they are especially ideal for machining centres (vertical and horizontal).

- Accuracy of 0.01 mm in clamping repeatability.
- Monoblock design avoids deformations due to high pressure and offers great rigidity and robustness.
- Ideal for working in horizontal and vertical machining centres.
- Grinding of all surfaces with a parallelism and perpendicularity of 0.02 mm.
- Possible working positions: supported on the base, on the side or on the head vertically.
- Side windows for quick cleaning of the inside of the vices.
- May be clamped to the table either by the four standard clamps supplied or by using four screws located in the body.
- Clamping force is 25/40/50 kN, depending on the model.

## SPECIAL JAWS

Possibility of working with machined soft jaws according to the shape of the work piece.

## SEMI-SPHERE

The ARNOLD MAT has a descending clamp system to avoid that the clamped part lifts up. This is a semi-sphere installed between the moveable jaw and the spindle shoe. When the clamping force is carried out by the spindle, this pressure is divided in two directions, one of which pulls down on the work-piece.

# ARNOLD MAT Mechanic

- Two clamping possibilities of the work piece, either towards the fixed head or in reverse direction.
- Fitted with a high pressure mechanical intensifier.
- Power regulator optional.
- Angle driver for handle clearance upon request.
- **Common features page 10.**

## TIPS FOR USE

- Should reverse clamping be needed, just place the spindle at the rear part of the fixed head, clamped by four screws. Then rotate the spindle shoe and the moveable jaw.

## SET SUPPLIED

- Base body
- Mechanical spindle
- 1 set of plain jaws
- 1 handle
- 4 end clamps
- Instruction manual

# ARNOLD MAT Hydraulic

- Fitted with a high pressure hydraulic intensifier which does not require any external supply.
- Power regulator optional.
- Angle driver for handle clearance upon request.
- **Common features page 10.**

## COMPENSATED CLAMP

These vices provide an enveloping clamp. The spindle does not push the moveable jaw from the end clamp, but it pulls it from the head. This effect means that the head of the vice and the work-piece suffer less deformation stress with high pressure.

## SET SUPPLIED

- Base body
- Hydraulic spindle
- 1 set of plain jaws
- 1 handle
- 4 end clamps

# ARNOLD MAT Prox-hydraulic

- Clamping towards the operator for an easier load and unload operation for heavy or oversized workpieces.
- Two clamping possibilities of the work piece, either towards the movable jaw or in reverse direction.
- The spindle operates at the rear part of the fixed vice head.
- Comes with a high pressure hydraulic intensifier.
- Angle driver for handle clearance upon request.
- **Common features page 10.**

## TIPS FOR USE

- Should reverse clamping be needed, just place the spindle at the opposite part of the fixed head, clamped by four screws. Then rotate the spindle shoe and the moveable jaw.

# ARNOLD MAT Oleo-dynamic

- Designed to automate processes and robotize them .
- Two clamping possibilities, either towards the fixed head or in reverse direction. Normal clamping is towards the fixed head.
- Fitted with a single acting oleo-dynamic spindle, with spring push-back effect.
- Rotary connection at the inlet and the outlet for oil.
- 4 mm. automatic stroke for closing and opening.
- Adjustable clamping force and directly proportional to oil pressure input (see manual).
- **Common features page 10.**

## TIPS FOR USE

- Should reverse clamping be needed, just place the spindle at the rear part of the fixed head, clamped by four screws. Then rotate the spindle shoe and the moveable jaw.

## ELEMENTS REQUIRED

- Hydraulic unit or single acting 500 bar pneumo-hydraulic pump with vice unit connection hose, pressure control switch, safety valve integrated into the unit and ON-OFF switch.
- Pressure gauge.

## SET SUPPLIED

- Base body
- Oleo-dynamic spindle
- Rotary connection
- 1 set of plain jaws
- 1 handle
- 4 end clamps

# ARNOLD MAT Pneumo-hydraulic

- Designed to automate processes and robotize them.
- Pneumo-hydraulic high pressure single acting intensifier, supplied by compressed air at 6 bars.
- Clamping force adjustable by the air pressure (see manual).
- Automatic stroke for closing and opening up to 3 mm.
- The vice operation may be manual (used with a valve unit sent with the vice) or by using a pedal situated near the machine or may be controlled by CNC by using a solenoid valve.
- **Common features page 10.**

## TIPS FOR USE

- The air must be filtered (dry air).
- Should control pedal be used, the set of valves supplied with the vice must be placed between the compressor and the pedal, not between the pedal and the vice.

## ELEMENTS NEEDED

- Connection of the compressor to the vice.
- Filter unit, gauge and lubricator of the air inlet.

## COMPENSATED CLAMP

These vices provide an enveloping clamp. The spindle does not push the moveable jaw from the end clamp, but it pulls it from the head.

This effect means that the head of the vice and the work-piece suffer less deformation stress with high pressure.

# ARNOLD

High Pressure ARNOLD MB2 vices are the most flexible vices. They also maintain their constant length irrespective of the size of the workpiece.

- Accuracy of 0.01 mm in clamping repeatability.
- May be clamped to the table either by the four standard clamps supplied or by using four screws within the body.
- Suitable for working in horizontal and vertical machining centres.
- Flexible Design: All the jaws of the MB2 vices are interchangeable.
- Side windows for quick cleaning.
- Clamping force is 40/50 kN depending on the model.
- Power regulator optional.
- Angle driver for handle clearance optional.
- Split vice for clamping larger work-pieces optional.

## SPECIAL JAWS

Possibility of working with machined soft jaws according to the shape of the workpiece.

# ARNOLD

High pressure ARNOLD CLASSIC vices achieve a clamping force of up to 80 kN.

- Accuracy of 0.01 mm in clamping repeatability.
- Monoblock design avoids deformations due to high pressure and offers great rigidity and robustness.
- The force applied by the high pressure spindle is transmitted to the work-piece right in the centre of the clamping jaw.
- Large aperture up to 375 mm and 845 mm if the body is in two parts.
- Clamping force is 25/40/50/80 kN, depending on the model.
- ARNOLD CLASSIC spindles can be used independently from the vice as a power clamping element in a workholding set up.

## SPECIAL JAWS

Possibility of working with machined soft jaws according to the shape of the work piece.

## VERSIONS

### STANDARD

Clamping to the machine table can be achieved through the holes and the slots on the side of the vice. It can be supplied with a rotary base.

### STRAIGHT

Its narrowness makes it easy for it to be placed jointly parallel to another vice, thereby allowing for a large clamping unit for large workpieces.

### TWO PART STRAIGHT

Ideal for large work-pieces. It clamps the work-pieces on top of the guides or on top of the table. An inner tie-rod joins both parts of the vice.

# ARNOLD CLASSIC Pneumo-hydraulic

- Designed to automate processes and robotize them .
- Pneumo-hydraulic high pressure single acting intensifier, supplied by compressed air at 6 bars.
- Clamping force adjustable by the air pressure (see manual).
- Automatic stroke for closing and opening up to 3 mm.
- The vice operation may be manual (used with a valve unit sent with the vice) or by using a pedal situated near the machine or may be controlled by CNC by using a solenoid valve.
- Two-parts straight vice option upon request.
- **Common features page 32.**

## TIPS FOR USE

- The air must be filtered (dry air).
- Should control pedal be used: the set of valves supplied with the vice must be placed between the compressor and the pedal, not between the pedal and the vice.

## ELEMENTS NEEDED

- Connection of the compressor to the vice.
- Filter unit, gauge and lubricator of the air inlet.

## SET SUPPLIED

- Base body
- Pneumohydraulic spindle
- Valve assembly
- 1 set of plain jaws
- Straight vice: + 4 end clamps
- Service manual

# ARNOLD

High pressure ARNOLD TWIN vices are capable of clamping two pieces simultaneously.

- Accuracy of 0.01 mm in clamping repeatability.
- Suitable for working in horizontal and vertical machining centres.
- Grinding of all surfaces with a parallelism and perpendicularity of 0.02 mm.
- Possible working positions: supported on the base, on the side or on the head vertically.
- Side windows for quick cleaning of the inside of the vices.
- Clamping force is 25/50 kN, depending on the size.

## COMPENSATED CLAMP

The exterior clamping pressure towards the centre provides a dynamically compensated clamp and avoids deformation.

## SPECIAL JAWS

Possibility of working with machined soft jaws according to the shape of the workpiece.

## CLAMPING POSSIBILITIES

Two workpieces can be clamped at the same time, with a difference in size of 3mm. between them or just one workpiece.

# ARNOLD TWIN Hydraulic

- Fitted with a high pressure hydraulic intensifier which does not require any external supply.
- Angle driver for handle clearance upon request.
- 6 different clamping types, interchanging the position of standard jaws: either by rotating the side jaws and fitting the stepped jaw in the middle, or by fitting any of the central jaws on the side closets to the handle.
- To clamp a single workpiece, place it in Station II.
- **Common features page 42.**

## 3RD HAND MECHANISM

Function which permits first one work-piece to be clamped and then the other, enabling it to be fitted in the vertical position.

Operation of the 3rd Hand: By turning the handle bring the moveable jaw I towards the work-piece situated in station I until it is clamped.

Maintaining the turn bring moveable jaw II towards the work-piece situated in station II until it is clamped.

Continuing with the turn, jumpstart the intensifier and start to clamp with high pressure.

## SET SUPPLIED

- Base body
- Hydraulic spindle
- 1 set of hard jaws
  - 2 x side jaws
  - 1 central jaw I (stepped)
  - 1 central jaw II (block)
- 1 handle
- 4 end clamps

- **Common features page 42.**

## ELEMENTS REQUIRED

- Hydraulic unit or single acting 500 bar pneumo-hydraulic pump with vice unit connection hose, pressure control switch, safety valve integrated into the unit and ON-OFF switch.
- Pressure gauge.

## SET SUPPLIED

- Base body
- Oleodynamic spindle
- 1 rotary connection
- 1 set of jaw
  - 2 x side jaws
  - 1 central jaw I (stepped)
  - 1 central jaw II (block)
- 1 handle
- 4 end clamps
- Service manual.

# ARNOLD TWIN Pneumo-hydraulic

- Designed to automate processes and robotize them.
- Fitted with a pneumo-hydraulic high pressure single acting intensifier, fed by compressed air at 6 bars.
- Clamping force adjustable by air pressure input (see manual).
- Automatic stroke for closing and opening up to 4 mm.
- The vice operation may be manual (used with a valve unit supplied with the vice), by using a pedal located near the machine or may be controlled by CNC using a solenoid valve.
- **Common features page 42.**

## USAGE TIPS

- The air must be filtered (dry air).
- Should the control pedal be used, the set of valves supplied with the vice must be placed between the compressor and the pedal, not between the pedal and the vice.

## ELEMENTS NEEDED

- Connection of the compressor to the vice.
- Filter unit, gauge and lubricator of the air inlet.

## SET SUPPLIED

- Base body
- Pneumo-hydraulic spindle
- Valve assembly
- 1 set of jaw
  - 2 x side jaws
  - 1 central jaw I (stepped)
  - 1 central jaw II (block)
- 4 End clamps

# ARNOLD

---

**ARNOLD IZI HYDRAULIC High Pressure vices, are compact automatic vices with long movement.**

- Accuracy of 0.01 mm clamping repeatability.
- Specially designed for rapid clamp or robotised systems.
- Steel components.
- All components are tempered and ground.
- Suitable for working in horizontal and vertical machining centres.
- Adjustable clamping force directly proportional to the oil pressure input (see manual).
- Possibility of working with machined soft jaws according to the shape of the work piece.

# ARNOLD

---

**High Pressure ARNOLD 5X, are fitted with a clamp as far away as possible from the body and therefore the machine bench.**

- Accuracy of 0.01 mm in clamping repeatability.
- Designed in two sizes M and L with an adjustable force of up to 30 kN in the uppermost part.
- Essential for highly specialized machining process such as titanium and aluminum, which requires totally different clamping forces.
- They maintain their constant length irrespective of the size of the work piece, being specially designed for the use in 5-axis machining centres.
- Exterior elements needed for achieving high pressure, which usually make 5X machining work difficult, are not required with this model.
- Power regulator available in M size.

# ARNOLD IZ1 Hydraulic

- Various clamps on one single base plate available, with a single oil input. In this way, a monoblock is obtained which can clamp a large number of small work-pieces taking up very little space.
- Fitted with a totally concealed double effect hydraulic cylinder.
- Moveable jaw guided by interior slides at the base of the vice to avoid upward movement of the work-piece and fixed jaw firmly clamped to the base body to maintain a secure reference.
- Totally concealed. No cleaning needed.
- Automatic 15 mm forward and backward movement.
- For 250 bar pressure, the resulting clamping force is 17,5 kN.
- **Common features page 50.**

## ELEMENTS REQUIRED

- Hydraulic unit or single acting with 300 bar pneumo-hydraulic pump with vice unit connection hose, pressure control switch, safety valve integrated into the unit and ON-OFF switch.
- Pressure gauge.

# ARNOLD

**ARNOLD SC vices are compact, high and self-centring and maintain constant length.**

- Accuracy of 0,01 mm in clamping repeatability.
- Accuracy 0,02 mm in centring.
- Designed to work on machining centres with small tables, as well as, within 5 controlled axes machining centres.
- Compact design with exterior guides that avoid deformation as the clamping force is distributed throughout the width.
- Steel components.
- Consealed vice: Totally closed to prevent chips from getting in.
- Threaded right-left spindle which can be operated with a standard key.
- Clamping force ranging from 10 to 35 kN, depending on the model.
- Interchangeable jaws can reach a height of 125 mm, which means they can overcome the biggest obstacle for this type of work by avoiding collisions with the machine spindle or the rotation of the table.
- All standard jaws are may be used by adding soft jaws first.
- Suitable for clamping round work pieces.
- Base plate available for raising the vice available, see p. 71 .

## SPECIAL JAWS

Possibility of working with machined soft jaws according to the shape of the workpiece.

## CLAMP CASING SYSTEM

The spindle within the base jaws, just at the top of guide support, allows for applied force to be as close as possible to the piece to be machined. This means that the torque power is used to its fullest.

90	941 150 090
125	941 150 125

SET SUPPLIED: 1 jaw with bolts.

### HARD CENTRAL BLOCK JAW

Width (A)	Code
90	941 311 090
125	941 311 125

SET SUPPLIED: 1 jaw with bolts.

### HARD CENTRAL STEPPED JAW

Width (A)	Code
90	941 061 090
125	941 061 125

SET SUPPLIED: 1 jaw with bolts.

### SET SOFT JAWS

SET SUPPLIED: 2 side jaws, 1 central block jaw and bolts.

- Designed for clamping pieces of difficult geometries.
- Can be machined and hardened.
- Material: 1140F (C45).

Code	841 181 090	841 181 125

## ARNOLD SC

### REVERSIBLE SMOOTH-CLAW/SERRATED JAW

For 070 size

- Designed to achieve a more aggressive clamping.
- Smooth-claw jaws get the most out of the material.
- The serrated part adds grip to the clamping.
- Material: Hardened steel.

Code	951 160 070
Width (A)	70
B	8
C	18,5
D	3

SET SUPPLIED: 1 jaw with bolts.

### SOFT JAW

- Designed for tiding pieces of difficult geometries.
- Can be machined and hardened.
- Material: 1140F (C45).

SET SUPPLIED: 1 soft jaw, 1 key nut and bolts.  
THIS JAW IS NECESSARY TO USE THE STANDARD JAWS.

Code	851 110 090	851 110 125
Width (A)	90	125
B	39,5	39,5
C	66	100

### SC5X + PLAIN JAW

- Designed for lifting the work piece and avoid wrecks.
- Material: Hardened steel.

Code	851 120 090	851 120 125
Width (A)	90	125
B	55	111,5
C	66	78
D	30	72
E	5	8

SET SUPPLIED: 1 fixed jaw, 1 plain jaw and bolts.

### BASE PLATE

- Accessory for give more height to the vice.

Code	850 410 070	850 410 090	850 410 125
Width (A)	72	91	126
B	70	90	90
C	142	250	350

SET SUPPLIED: 1 base plate, 3 key nuts, 4 end clamps and bolts.

# DUO

## DUO MAT

- **Support structure** for two back to back vices.
- The jaws should be clamped one into the other as well as to the base plate.
- Specially designed for horizontal machining centers.
- Contains the necessary elements for aligning and assembling two vices.
- With special drain for coolant and chip evacuation.

## Sales terms and conditions

### Article 1-Subject of the contract

This agreement regulates the relationship between the CUSTOMER and FRESMAK S.A. (hereinafter FRESMAK) in regard to the procurement of products and services that the CUSTOMER contracts with FRESMAK.

Offers and quotations made by FRESMAK are not binding, understood as sales contract only when FRESMAK confirms an order in writing.

These sales conditions may be amended only by written agreement between the parties, thus the terms or conditions contained, printed or handwritten, in orders, letters or other documents issued by the Customer become invalid.

The amendment of these sale terms by FRESMAK shall not affect contracts already signed.

All future purchases of goods from the Customer, in the absence of an express agreement, shall be subject to these terms and conditions.

### Article 2-Orders

1.- All supplies and services of FRESMAK are subject to the conditions expressed below. Any provision in any order from the CUSTOMER deviating from these conditions is explicitly rejected. Such provisions shall not be binding for FRESMAK unless they have been agreed upon and signed by both parties in writing.

2.- The sale is formalised when FRESMAK accepts the order by sending the corresponding Order Confirmation, either through fax or e-mail, according to the customer's preference. The sending of an order by the CUSTOMER does not constitute a contract, although FRESMAK has previously presented a quotation. Any supplementary agreement and any subsequent modifications requested by the CUSTOMER must be confirmed and shall not take effect until there is an express and written consent from FRESMAK.

3.- FRESMAK reserves the right to modify its products and make changes to technical data and performance characteristics insofar as these are for the purpose of technical progress.

### Article 3 - Quotations

1.- All quotations are made on the understanding that the whole of the quantity quoted for will be ordered; otherwise FRESMAK reserves the right to revise the quotation.

### Article 4.-Price

1.- FRESMAK provides to all its customers up-dated information about prices. FRESMAK can modify the prices at any time and without prior individualized communication, always subject to what may be mentioned in a particular contract with the CUSTOMER.

2.- In the case of orders with a net total value of the material less than 30 EUR (before taxes), FRESMAK will apply a supplement for administrative costs to increase its value up to that amount.

3.- The values stated in the FRESMAK price list do not include shipping, insurance and installation costs nor taxes.

4.- FRESMAK ensures the price included in the quotation until the deadline mentioned on the same.

5.- The costs to cover the integrated management systems of waste packaging and containers shall be borne by the CUSTOMER. To this end, the customer must fulfil the obligations set by Law 11/1997 of 24 April on packaging and packaging waste, or any other legislation replacing or applicable. In the event that pursuant to these regulations, FRESMAK is obliged to carry out a series of actions to reduce the environmental impact of packaging and management of packaging waste throughout their entire life it may affect the cost of complying with these obligations in the CUSTOMER, who accepts it by subscribing to the present conditions.

### Article 5.- Payment conditions

1.- The payment of the invoiced price must be maximum 30 days from the date of issuance of the invoice, unless other conditions are specified on the invoice. If delivery of the goods or materials shall be prevented or delayed by the CUSTOMER, payment shall be made within 30 days of the date of delivery as if there had been no such prevention or delay.

2.- FRESMAK reserves the right to charge interest and cost of collection of any unpaid remaining invoice, in application of the law 15/2010 dated 5th of July, in which measures for combating late payment in commercial operations are established.

3.- If the Customer defaults in making payment on the due date agreed with FRESMAK, FRESMAK may suspend its pending deliveries.

4.- In the case of early termination of the contract for any reason, the CUSTOMER shall be obliged to pay immediately all the work performed and products delivered, as well as to pay the damages that occur to FRESMAK.

5.- If goods are returned through no fault of FRESMAK, FRESMAK reserves the right to make a handling charge.

6. If the payment is not made by the due date, the customer must pay interests on the value of the amount due, starting from the agreed due date, 6% over 12 months.

### Article 6.- Delivery time

1.- FRESMAK undertakes to comply with all delivery times agreed with the CUSTOMER, however these may be changed by FRESMAK for reasons of production, and in such a case FRESMAK must communicate it to the customer with the utmost urgency. The CUSTOMER knows and accepts this situation, which will not generate any right to demand any penalty or the termination of the contract.

### Article 7.- Transport

1.- The transport costs are not included in the price of the product and are payable by the customer.

2.- Once the supplied materials get out of their warehouses, FRESMAK will not be responsible for these or the duration of their shipment. FRESMAK will not accept responsibility for loss from package, damage, wrong delivery, discrepancies or short shipments unless a written complaint is made to FRESMAK within ten days after the delivery of the consignment and unless FRESMAK is given an opportunity of inspection

3.- If at the time of delivery readily-evident defects are detected on the package or the product itself, the CUSTOMER must execute it in writing in the delivery note signed to the carrier; otherwise claims for this concept are not accepted.

4.- If the shipping or delivery is delayed by will of the CUSTOMER for a period exceeding one month, counting from the date on which the material was ready, the CUSTOMER shall be liable to pay the storage charges until its effective delivery.

### Article 8.- Quality and Performance Warranty

1.- FRESMAK exclusively guarantees that products will be in accordance with agreed specifications on the date of delivery.

2.- All products have a FRESMAK warranty for 12 months from receipt of the same, for which the delivery note of these will be taken into account.

3.- In the event that the CUSTOMER detects defective products, it must be notified to FRESMAK within a maximum period of fifteen days from their receipt, in writing and reliably, specifying at least the product serial number and a brief description of the defect.

4.- Once confirmed by FRESMAK the existence of defective products, these will be repaired or replaced, at the option of FRESMAK, free of charge, always within the stated warranty period. Excluded from this warranty are parts subject to normal wear and tear.

5.- Once reviewed a product, if it is determined that it is operating correctly or that the cause of the malfunction is unrelated to the product itself, it shall be returned to the CUSTOMER freight forward, along with a minimum charge of €20 and maximum 2 hours of workforce for handling and verification.

6.- Technical information and documentation of existing FRESMAK products can be downloaded by the CUSTOMER from the website FRESMAK.

7.- This warranty shall be not applied, if the customer or a third party had made modifications, repairs or manipulations on delivered products.

8.- Should products be modified, repaired or handled by the customer or a third party warranty shall not be applied.

### Article 9.- Return Policy

1.- FRESMAK can accept product returns from the CUSTOMER provided that they meet the following criteria:

a) Only the return of standard products is accepted. Standard product means, one whose part number appears in the catalogue and is enough to define the product without adding more specifications, e.g. configurable, customised elements and spare parts.

b) Due to managing costs, returns will only be accepted when the net amount of all the material to be returned is higher than €100.

c) Returns are only accepted within thirty days from the receipt of the product, meaning the date of the delivery note issued by FRESMAK.

d) When applying for the return, the order number FRESMAK and / or delivery note number and / or invoice number with which the product was purchased shall be stated.

2.- If the acceptance criteria are met and the product is in its original sealed packaging, 100/% of its purchase price shall be paid. In any other situation, up to a maximum of 85% will be paid depending on its state.

3.- Subject to acceptance criteria, FRESMAK will send to the CUSTOMER a document which shall include the goods and quantities to return and the general return conditions. The CUSTOMER must sign this document as acceptance of the return conditions and attach it to the material returned.

4.- The CUSTOMER shall bear in all cases the costs caused by the return of the goods to FRESMAK.

5.- In those cases in which, once received the returned product, it is proved that the acceptance criteria are not met; FRESMAK shall return the product at the CUSTOMER's expense.

### Article 10.- Limitation of Liability

1.- FRESMAK shall not be liable for any loss or damage caused as a result of factors or causes that are not attributable to FRESMAK.

2.- FRESMAK shall be liable for defects of goods provided that the customer had informed FRESMAK about the defects within the warranty periods specified above. The liability is limited to carry out the repairs in our facilities and/or to deliver alternative goods.

3.- FRESMAK shall not be liable for loss of profit or other consequential damages, irrespective of the cause thereof.

4.- If the goods are manufactured by FRESMAK according to the customer's design and/ or specifications, FRESMAK will not guarantee that such products are suitable for the use intended by the CUSTOMER.

### Article 11.- Title and risk

1.- All goods shall be at the risk of the CUSTOMER from the time of delivery.

2.- All goods shall remain the property of FRESMAK, reserving its domain, until all debts owed by the CUSTOMER to FRESMAK are settled, and all amounts corresponding to the order are paid.

3.- If, once payment is overdue and not been paid to FRESMAK, the Customer sells the goods or part thereof to a third party, it is understood that such sale shall be as fiduciary agent of FRESMAK. The CUSTOMER shall hold the proceeds of any such sale on behalf of FRESMAK and shall keep such proceeds in a separate account, paying the amount obtained from such sale to FRESMAK immediately.

### Article 12.- Health and Safety at work

1.- The CUSTOMER will ensure that the goods are properly and safely installed in accordance with any instructions that shall have been supplied by FRESMAK and with good trade practice and that they will be safe and without risk to health or safety when used. FRESMAK is not responsible for the breach by the CUSTOMER of this clause.

### Article 13.- Industrial and intellectual property

1.- FRESMAK retains all copyrights, patents, and the right of legal protection of registered design in its drawing, documents and equipment.

2.- Drawings, specifications, documents, etc appended to quotations or forwarded to CUSTOMERS are for their personal use only. They may neither be copied in whole or part or made accessible to third parties without FRESMAK's express written consent.

### Article 14.- Data protection and confidentiality

1.- The CUSTOMER hereby authorizes FRESMAK to process the personal data included in this agreement and in subsequent documents thereof electronically, with the purposes deriving directly from the relationship established between them - among others, receiving advertising and information about services and products of the company by any means of communication - and all this with the limits arising from legislation in force.

2.- In accordance with Organic law 15/1999, on the Protection of Personal Data, you are duly informed that if you wish to exercise your rights of access, rectification and cancellation, granted by this law, you should address in

writing to the registered office of FRESMAK, located in Araba st. 45, 20800 Zarautz, Spain. For informational purposes, FRESMAK S.A. is appointed as responsible for the file, with registered office at the above address mentioned.

3.- FRESMAK warrants the CUSTOMER to maintain absolute confidentiality about any information, document or product owned by the CUSTOMER which is delivered within the development of the business relationship.

### Article 15.- Responsibility for beyond circumstances

1.- FRESMAK will not be responsible for any failure to fulfil any term of this agreement if this is caused by any circumstance beyond FRESMAK.

### Article 16.- Applicable law and jurisdiction

1.- This agreement, both for its application and interpretation shall be governed by the Spanish or Autonomous Community law appropriate under current regulations. The language will be Spanish.

2.- The parties undertake to resolve amicably any dispute that may arise on this agreement. In the case that an amicable solution may not be possible, resulting in judicial proceedings, both parties agree, with express waiver of any other jurisdiction that could correspond to them, to submit to the jurisdiction of the courts and tribunals of San Sebastian (Gipuzkoa-España).

## ORDERS

Sales related with the products in this catalogue are made through distributors. You can ask Fresmak for the contact details of the distribution in your county.

## MAINTENANCE AND REPAIRS

Fresmak guarantees maintenance and repair service for its vices and spindles in 4 working days (+delivery). Moreover, should the product arrive at 10:30 a.m. a 24 hour express repair service for spindles is also with an additional cost of 20%.

## WAREHOUSE

Almost all the products in this catalogue are on permanent stock, thus the delivery by FRESMAK is immediate.
