|                             |           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                       |             |              |                                       |             |              |                                       |             |              |     |     |     |           |           |                                       |             |              |                                       |             |              | |                             |           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                       |             |              |                                       |             |              |                                       |             |              |     |     |     |           |           |                                       |             |              |                                       |             |              | |                             |           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                       |             |              |                                       |             |              |                                       |             | |                             |           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                       |             |              |                                       |             |              |                                       |             | |                             |           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                       |             |              |                                       |             |              |                                       |             |              |     |     |     |           |           |                                       |             |              |                                       |             |              | |                             |           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                       |             |              |                                       |             |              |                                       |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                       |             |              |                                       |             |              |                                       |             | |                             |           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                       |             |              |                                       |             |              |                                       |             | |                             |           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                       |             |              |                                       |             |              |                                       |             | |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |    |
|                             |           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                       |             |              |                                       |             |              |                                       |             |              |     |     |     |           |           |                                       |             |              |                                       |             |              | |                             |           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                       |             |              |                                       |             |              |                                       |             |              |     |     |     |           |           |                                       |             |              |                                       |             |              | |                             |           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                       |             | </           |                                       |             |              |                                       |             | ## Application

## Matières

Aciers inoxydables  
ferritique/martensitique

Aciers inoxydables  
[Cr-Ni/1.4301]

Aciers inoxydables  
[Cr-Ni-Mo-.../1.4571]

Aciers réfractaires  
[17-4 PH]

TRIBO  
ET1621

A schematic diagram of a mechanical system. It consists of a mass (represented by a grey rectangle) supported by a spring (represented by a coiled line) and a damper (represented by a piston in a fluid-filled cylinder). The mass is connected to a fixed base (represented by a hatched rectangle) via the spring and damper. Red arrows indicate the displacement of the mass from its equilibrium position.

A schematic diagram of a mechanical assembly. It features a central vertical shaft with a piston-like component in the middle. To the left of the shaft is a large red double-headed vertical arrow. To the right of the shaft is a coiled spring with a red double-headed vertical arrow next to it. The entire assembly is shown within a cross-section of a block at the bottom.

### Application

The diagram illustrates a shock absorber application. It features a central piston rod with a piston head at the bottom and a spring at the top. The piston head is shown in a cross-sectioned view, indicating its internal structure. The spring is represented by a coiled line. Red arrows indicate the direction of movement: a double-headed arrow on the left and a single-headed arrow on the right, both pointing up and down. The entire assembly is mounted on a base, represented by a hatched rectangular block.

A schematic diagram of a mechanical system. It consists of a mass (represented by a grey rectangle) supported by a spring (represented by a coiled line) and a damper (represented by a piston in a fluid-filled cylinder). The mass is connected to a fixed base (represented by a hatched rectangle) via the spring and damper. Red arrows indicate the displacement of the mass from its equilibrium position.

Technical drawing of a screwdriver with dimensions. The drawing shows a side view of the screwdriver with the following dimensions labeled:  $a$  (width of the handle),  $d_1$  (diameter of the handle),  $L$  (total length),  $P$  (pitch of the threads),  $c$  (height of the tip),  $E$  (width of the tip),  $l$  (length of the threaded part), and  $l_1$  (length of the shaft).

[illegible]

Technical drawing of a double-flute drill bit. The drawing shows the bit from the side, with dimensions labeled. The total length is  $L$ . The diameter of the main body is  $d_1$ . The diameter of the cutting edge is  $d$ . The length of the cutting edge is  $l_1$ . The length of the flute is  $l$ . The length of the cutting edge is  $E$ . The length of the cutting edge is  $P$ . The length of the cutting edge is  $C$ . The length of the cutting edge is  $a$ .

Technical drawing of a screwdriver. The drawing shows a side view of the tool. Key dimensions and labels include:
 

- $a$ : Diameter of the handle end.
- $d_1$ : Diameter of the main shaft.
- $L$ : Total length of the screwdriver.
- $l_1$ : Length of the shaft section.
- $l$ : Length of the threaded section.
- $P$ : Pitch of the thread.
- $E$ : Width of the blade.
- $C$ : Length of the blade.

## Application

A diagram showing a white rectangular block with a U-shaped clip attached to its top surface. The clip is a coiled spring that loops around the block and then extends horizontally to the right, ending in a hook-like shape. The background is dark blue.

## Technologies d'outil

Forets de perçage avec quatre chanfreins (Deux frictions et deux terrains guide)

- Amélioration de la rectitude de l'alésage
- Meilleure qualité de perçage et meilleur alignement
- Cours de l'alésage limité lors du perçage de trous transversaux
- Alignement précis des trous avec de bonnes surfaces et soutien optimal de l'outil à la sortie

Forets de perçage avec rainure de dégagement polie et optimisée et avec arrosage central

- Réduction de la friction ce qui réduit la tendance à l'adhésion ainsi que la formation de chaleur et améliore le dégagement des copeaux

Forets de perçage avec rainure de dégagement polie et optimisée, sans arrosage central

- Réduction de la friction ce qui réduit la tendance à l'adhésion ainsi que la formation de chaleur et améliore le dégagement des copeaux

Forets de perçage avec attachement de qualité h5

- Précision élevée de la concentricité et de l'excentricité
- Optimal pour les systèmes de fixation de précision

## Matières de coupe

**HM  
XA**

Carbure micrograin dureté 1950 HV. Teneur en cobalt 8%. Se distingue particulièrement par sa résistance à l'abrasion.

**HM  
MGX**

Carbure micrograin de haute performance avec carbures de tungstène ultrafins. Dureté 1610 HV. Teneur en cobalt 10%.

**HM  
MG10**

Carbure micrograin dureté 1600 HV. Teneur en cobalt 10%.

**HM  
MGD<sup>2</sup>**

Carbure micrograin à haute résistance à la flexion et au cisaillement présentant une excellente élasticité.

**HM**

Carbure universelle à micro grains.

**HSS**

Matière de coupe de haute performance, alliage ASR produit par fusion métallurgique.

## Arrosage intégré

Les forets avec arrosage central garantissent une meilleure formation et dégagement de copeaux en garantissant l'augmentation du processus de sécurité et une augmentation de durée de vie de l'outil.

Foret sans arrosage central.

## Angle de pointe et angle d'hélice

L'ampleur de l'angle de pointe influence de manière décisive le spectre des matériaux usinables. De plus, les petits angles de pointe garantissent un meilleur centrage; les grands angles de pointe diminuent le couple de rotation.

En ce qui concerne les forets de perçage, l'angle d'hélice influence de manière décisive l'angle de coupe sur l'arête principale (pointe du foret). De ce fait, les angles d'hélice élevés sont à utiliser pour les matières tendres, les petits angles d'hélices pour les matières dures et fragiles.

## Exécutions et dimensions de forets hélicoïdaux

Forets hélicoïdaux en carbure, 3xd

Les dimensions de cet outil correspondent aux indications selon DIN 6537 K «Forets hélicoïdaux en carbure avec queue cylindrique dégagée».

Forets hélicoïdaux en carbure, 5xd

Les dimensions de cet outil correspondent aux indications selon DIN 6537 L «Forets hélicoïdaux en carbure avec queue cylindrique dégagée».

Forets hélicoïdaux en carbure et forets pour perçage profonds en carbure, supérieur à 5xd

Conformément à la norme de l'entreprise.

Forets hélicoïdaux en carbure 8xd, optimisés

Conformément à la norme de l'entreprise, mais avec un rapport l/d optimisé pour la stabilité optimal de l'outil.

## Exécutions et dimensions spéciales

90°

Indication de l'angle de pointe pour les forets à pointer ou les alésoirs.  
Alésoirs 90° selon DIN 335

## Profondeurs du perçage

Indication de la profondeur de perçage nominale. (Exemple: 5xd: 5 fois le diamètre de perçage).

La profondeur de perçage nominale ne correspond pas à la profondeur maximale! La profondeur de perçage maximale est indiquée sous  $L_{max}$ .

# Légende concernant la page des produits sur les outils de perçage

## Forme de la queue / Exécutions de queues

-  Outils VHM avec queue cylindrique: exécution de queue selon DIN 6535 HA
-  Outils VHM avec queue cylindrique et méplat: exécution de queue selon DIN 6535 HB
-  Microforets en carbure monobloc et forets pour perçages profonds à tige cylindrique: exécution de la tige selon la norme d'usine

## Aptitude aux opérations d'usinage

-  Un fond bleu signifie que l'outil est remarquablement bien adapté à ce matériau.
-  Un fond bleu clair signifie que l'outil est bien ou suffisamment adapté à ce matériau.

## Abréviations

- d<sub>1</sub>** Diamètre de coupe [mm]
- d<sub>2</sub>** Diamètre de queue [mm]
- d<sub>3</sub>** La zone face de diamètre des fraises coniques [mm]
- l<sub>1</sub>** Longueur totale de l'outil [mm]
- l<sub>2</sub>** Longueur de la rainure à copeaux [mm]
- l<sub>3</sub>** Longueur du 2ème étage (Forets à étages) [mm]
- l<sub>4</sub>** Longueur de la queue [mm]
- L<sub>max</sub>** Profondeur maximale de perçage de l'outil
- L<sub>k</sub>** Profondeur de perçage pour chanfrein (Forets à étages)

# Instructions techniques pour l'utilisation des outils de perçage

## La pression de lubrification et de refroidissement

Fondamentalement, le perçage est réalisé avec lubrification. L'objectif est d'optimiser l'efficacité du rapport copeaux/ évacuation de chaleur. Les aciers trempés ou les matériaux abrasifs peuvent également être travaillés à sec ou avec une quantité minimale de lubrification.

Si le liquide de refroidissement est ajouté par l'extérieur, il faut assurer le bon positionnement de celui-ci. Il devra être dirigé dans le goujure (parallèle à l'angle d'hélice) et dans le trou d'entrée.

L'utilisation de l'arrosage central assure une amélioration de la durée de vie et des performances de l'outil. Il est nécessaire d'adapter la pression minimale de lubrification par rapport au diamètre de l'outil.

Le tableau suivant fournit une ligne directrice de la pression du liquide de refroidissement recommandée par Fraisa pour l'arrosage central des forets hélicoïdaux:

| Pression nécessaire du liquide de refroidissement pour les forets hélicoïdaux avec arrosage central avec volume optimisé |          |          |          |           |            |            |
|--------------------------------------------------------------------------------------------------------------------------|----------|----------|----------|-----------|------------|------------|
| Exécutions                                                                                                               | < ø 3 mm | ø 3-5 mm | ø 5-8 mm | ø 8-12 mm | ø 12-16 mm | ø 16-20 mm |
| jusqu'à 5xd                                                                                                              | 60 bar   | 50 bar   | 30 bar   | 25 bar    | 20 bar     | 15 bar     |
| 8xd – 30xd                                                                                                               | 80 bar   | 60 bar   | 40 bar   | 30 bar    | 25 bar     | 20 bar     |
| Pression nécessaire du liquide de refroidissement pour les forets hélicoïdaux avec arrosage central/MMS                  |          |          |          |           |            |            |
| Exécutions                                                                                                               | < ø 3 mm | ø 3-5 mm | ø 5-8 mm | ø 8-12 mm | ø 12-16 mm | ø 16-20 mm |
| jusqu'à 5xd                                                                                                              | 12 bar   | 10 bar   | 9 bar    | 8 bar     | 8 bar      | 7 bar      |
| 8xd – 30xd                                                                                                               | 14 bar   | 12 bar   | 10 bar   | 9 bar     | 9 bar      | 8 bar      |

## Concentricité

La précision de concentricité dans le processus de perçage est entre autre un paramètre important du process. L'erreur de concentricité doit être aussi petite que possible, car cela influence fortement l'usure. Le faux-rond doit être contrôlé en particulier dans les diamètres de perçage inférieurs à 6 mm. La mesure de contrôle est réalisée avec un outil monté dans son moyen de serrage et sur la broche de la machine.

Le tableau suivant fournit une ligne directrice du défaut de concentricité max. recommandée de Fraisa:

| Erreur max. de concentricité de forets hélicoïdaux |          |          |          |           |            |            |
|----------------------------------------------------|----------|----------|----------|-----------|------------|------------|
| Plage de diamètres                                 | < ø 1 mm | ø 1-3 mm | ø 3-6 mm | ø 6-10 mm | ø 10-16 mm | ø 16-20 mm |
| Erreur max. de concentricité                       | 3 µm     | 5 µm     | 10 µm    | 15 µm     | 20 µm      | 25 µm      |

## Centrage et alésage pilote

Forets de perçage doit toujours être perpendiculaire à la pièce. Si le perçage inclinée est obligatoire, il est indispensable de réaliser une surface perpendiculaire à l'outil.

L'angle de pointe du foret à centrer doit toujours être supérieur à l'angle de pointe du foret hélicoïdal. Ainsi, un centrage optimal et une meilleure tenue à l'usure sont obtenus.

Fraisa donne la recommandation suivante pour les centrages et les alésages pilotes:

| Exécutions  | Matières de coupe | Recommandation                                                               |
|-------------|-------------------|------------------------------------------------------------------------------|
| jusqu'à 5xd | Carbure           | Non                                                                          |
| jusqu'à 5xd | ASR               | Oui                                                                          |
| 8xd         | Carbure           | Facultatif. Une amélioration de cylindricité peut être obtenue par centrage. |
| 12xd – 30xd | Carbure           | Oui, un trou pilote est nécessaire (voir page 428)                           |

# Instructions techniques pour l'utilisation des forets pour perçage profonds

Pour améliorer tant la durabilité que la fiabilité des forets, Fraisa SA recommande de procéder comme suit lors du perçage:

## 1<sup>ère</sup> Etape

Alésage pilote =  $1.5 \times d$ .

p. ex. Supradrill® U 3xd. B62011.

**L'alésage pilote doit être exempt de copeaux avant la pénétration du foret!**

## 2<sup>ème</sup> Etape

Introduire l'outil dans l'alésage à une vitesse de 300 t/min et une vitesse d'avance  $v_f$  de 1000mm/min.

Sans liquide de refroidissement jusqu'à 1 mm du fond de l'alésage pilote.

## 3<sup>ème</sup> Etape

Percer afin d'obtenir 3xd à une vitesse de coupe et d'avance réduite. Réduire ainsi la vitesse de coupe et d'avance à 40 % des données de coupe recommandées par Fraisa. L'alimentation en liquide de refroidissement doit être mise en marche.

## 4<sup>ème</sup> Etape

Augmenter la vitesse de rotation et d'avance de façon à obtenir les données de coupe recommandées; sans interruption de l'avance, le foret devant être en prise.

**Poursuivre l'alésage sans ventilation!**

## 5<sup>ème</sup> Etape

Reculer le foret avec

$v_f = 1000 \text{ mm/min}$ , jusqu'à  $1.5 \times d$  de l'entrée d'alésage.

Position comme 2<sup>ème</sup> étape.

## 6<sup>ème</sup> Etape

Ensuite, réduire la vitesse à maximum 300 t/min.

Arrêter l'arrosage.

Retirer le foret de l'alésage.

### CONSEIL DE SECURITE

Les forets longs pour perçages profonds ne doivent tourner qu'à une vitesse faible (max. 300 t/min) lorsque ceux-ci sont à l'extérieur de l'alésage.

Toute vitesse de rotation plus élevée risque de causer des vibrations au niveau du foret et, par là, une rupture de l'outil.

# Formules concernant les données de coupe

|                      |                                                                                       |

# Légende concernant la page des produits sur les outils de filetage

## Norme du filetage

Le profile du taraud correspond aux normes mentionnées sous «Types de filetage».

## Formes de queue

Queue de serrage cylindrique selon normes d'outils indiquées.

Queue de serrage cylindrique avec méplat selon normes d'outils indiquées.

Queue de serrage cylindrique avec carré selon normes d'outils indiquées.

Queue de serrage cylindrique avec carré similaires aux normes d'outils indiquées.

Queue de serrage cylindrique avec carré.

## Formes des trous de perçage

Les avant-trous de perçage doivent correspondre au filetage prévu.  
(Règle général pour le taraudage: diamètre de perçage = diamètre nominal du taraudage – le pas).

Outil à fileter conçu pour des trous borgnes.

Outil à fileter conçu pour des trous traversants.

Outil à fileter conçu pour des trous borgnes et traversants.

Outil à fileter conçu pour les trous borgnes coniques et traversants coniques.

## Formes d'attaque / Formes de guidage du cône

Forme d'attaque pour tarauds selon DIN 2197, table 4: type B. Le nombre de pas est entre 3.5 et 5.

Forme d'attaque pour tarauds selon DIN 2197, table 4: type C. Le nombre de pas est entre 2 et 3.  
L'angle d'entrée de guidage du cône pour le taraud à refouler selon DIN 2175, table 4: type C, soit:  $2 \text{ à } 3 \times \text{le pas}$ .

L'angle d'entrée de guidage du cône pour le taraud à refouler selon DIN 2175, table 4: type E, soit:  $2 \times \text{le pas au maximum}$ .

## Evacuation de copeaux

Outil à fileter avec évacuation de copeaux vers l'avant.

Outil à fileter avec évacuation de copeaux vers l'arrière.

Outil à fileter pour matière à copeaux cassant.

## Tarauds à refouler

Outil à fileter forme polygonale sans rainures de lubrification.

Outil à fileter forme polygonale avec rainures de lubrification.

## Fraises à fileter

Approprié pour filetage intérieur.

Approprié pour filetage extérieur.

# Légende concernant la page des produits sur les outils de filetage

## Aptitude aux opérations d'usinage

Un fond bleu signifie que l'outil est remarquablement bien adapté à ce matériau.

Un fond bleu clair signifie que l'outil est bien ou suffisamment adapté à ce matériau.

Le champ supplémentaire indique les autres matériaux pouvant être usinés.

## Lubrifiants réfrigérants

En général, lors la fabrication des taraudages par perçage et surtout par refoulage du filet une lubrifications suffisante doit être garantie. Plus le taraudage est profond, plus une lubrification est importante.

Lors de la fabrication des taraudages, les meilleurs résultats peuvent être obtenus avec huile (effet de lubrification). L'usinage avec une émulsion de 5% au minimum est également possible.

Pour l'usinage, l'huile comme lubrifiant est nécessaire.

Pour l'usinage, une huile avec additifs spéciaux comme lubrifiant est nécessaire.

Définir le diamètre du trou de perçage selon colonne matériaux critiques à la page 445.

# Instructions techniques pour l'utilisation des outils de filetage

## Taraudage avec mandrin de compensation de longueur

La fonction de compensation du mandrin doit être garantie (pas de grippage). Si non, les conséquences peuvent être un filetage défectueux ou un pas incorrect. La force de traction du mandrin à compensation de longueur doit être choisie en fonction du filetage et de la matière à usiner.

La programmation d'une vitesse de rotation trop élevée peut générer des problèmes. Si la vitesse de rotation sélectionnée ne peut pas être atteinte (en raison de l'inertie de la machine), cela peut entraîner la rupture précoce de l'outil ou des défauts d'usinage du filet. En y regardant plus précisément, une haute vitesse de rotation n'engendre souvent pas l'économie de temps espérée.

## Rigid Tapping

Rigid Tapping est utilisé pour des machines modernes avec commande des broches synchronisée. Tous les outils ont un méplat et peuvent être employés dans des mandrins conventionnels.

Lors du taraudage en Rigid Tapping, une distance de sécurité programmée doit être suffisamment grande. Si ce n'est pas le cas, avant l'entrée dans le trou se pose le problème de la désynchronisation de la broche de la machine et de l'avance. La conséquence est alors une erreur de pas, y compris lors du taraudage en mode synchronisé.

Chez diverses machines, c'est possible que le nombre de tours recommandé ne peut pas être atteint dans l'usinage synchrone. Dans ces cas, il est nécessaire de travailler avec le maximum de nombre de tours où le synchronisme de la machine est encore garanti.

## Taraudage avec mandrin de compensation de longueur ou Rigid Tapping

# Instructions techniques pour l'utilisation des outils de filetage

## Durcissement des parois du trou

Lors du perçage, il convient de veiller à utiliser une mèche adaptée et intacte. Si l'usure est trop importante, le perçage peut entraîner le durcissement de la zone de contact. Une conséquence de ce durcissement peut provoquer la rupture du taraud.

## Durcissement et refoulement du chanfrein

Pour préparer le trou, il convient d'utiliser de bons outils, adaptés au matériau. L'utilisation d'un foret aléueur trop usé entraîne le durcissement ou le refoulement du chanfrein. L'outil a alors des problèmes déjà à son entrée ce qui peut provoquer des ébréchantures. Le chanfreinage du trou est important pour le guidage du taraud.

## Filetages profonds

La fabrication de filetages profonds nécessite l'usage d'outils à longues goujures. Dans le cas contraire, le problème de la rupture de l'outil en raison d'une accumulation de copeaux peut se présenter, car les copeaux ne peuvent pas s'évacuer hors du trou. En Rigid Tapping, il est possible d'usiner le filetage en plusieurs étapes, afin de raccourcir les copeaux. Il est important que le refroidissement soit suffisant.

## Fonction du mandrin à compensation de longueur

La fonction de compensation de longueur du mandrin doit être garantie (pas de grippage). Si non les conséquences peuvent être un filetage défectueux ou un pas de filetage incorrect. La force de traction du mandrin à compensation de longueur doit être choisie en fonction du filetage à usiner.

## Orientation correcte du jet de liquide de refroidissement

L'orientation du jet de liquide de refroidissement joue un rôle important lors du taraudage par enlèvement de copeaux. Il faut que le jet soit dirigé depuis en haut en direction des goujures de sorte à ce que le refroidissement soit aussi efficace en profondeur. Un jet mal dirigé peut causer des problèmes de génération de température dans le trou et, de ce fait, de soudage à froid du matériau ce qui peut avoir pour conséquence la mauvaise formation des copeaux et la réduction de la durée de vie de l'outil.

## Distance de sécurité

Lors du taraudage en Rigid Tapping, une distance de sécurité programmée doit être suffisamment grande. Si ce n'est pas le cas, avant l'entrée dans le trou se pose le problème de la désynchronisation de la broche de la machine et de l'avance. La conséquence est alors une erreur de pas, y compris lors du taraudage en mode synchronisé.

## Aptitude de la machine

Il est possible que diverses machines ne puissent pas fonctionner à la vitesse de rotation recommandée. Dans un tel cas, la vitesse de rotation de la machine doit être programmée en conséquence.

## Vitesse de rotation inconstante

La programmation d'une vitesse de rotation trop élevée peut générer des problèmes: si la vitesse de rotation sélectionnée ne peut pas être atteinte (en raison de l'inertie de la machine), cela peut entraîner la rupture précoce de l'outil ou des défauts d'usinage du filet. En y regardant plus précisément, une haute vitesse de rotation n'engendre souvent pas l'économie de temps espérée.

Cycle de fraisage à tarauder à droite (dans le sens de l'avance) avec une fraise à tourbillonner

# Instructions techniques pour l'utilisation des fraises à fileter

## Détermination de la vitesse d'avance

$V_f \neq V_{fc}$

Conversion de la vitesse d'avance souhaitée sur la pièce à usiner  $v_f$  vers la vitesse d'avance à programmer  $v_{fc}$  au centre de l'outil:

**Pour filetage intérieur**

$$v_{fc} = \frac{v_f \cdot (d - D_1)}{d}$$

**Pour filetage extérieur**

$$v_{fc} = \frac{v_f \cdot (d + D_1)}{d}$$

Diamètre nominal  $d$  du filetage

## Prévention des distorsions de profil

Pour éviter les déformations de profil, le diamètre de la fraise  $D_1$  ne doit pas représenter plus de  $\frac{2}{3}$  du diamètre  $d$  de l'avant-trou.

La surépaisseur de l'avant-trou doit être comprise entre 0.1 et 0.3 mm.

Ainsi, le filetage est fraisé de façon irréprochable.

# Conditions générales

## 1. Généralités

- 1.1 Le contrat est conclu par la confirmation écrite (confirmation de commande) de Fraisa SA ou de ses filiales (ci-après "fournisseur") par laquelle la commande est acceptée.
- 1.2 Les divergences par rapport à la commande dans la confirmation de commande s'intègrent au contenu du contrat dans la mesure où le mandant ne les récusé pas par écrit dans un délai de 5 jours ouvrés à compter de la réception de la confirmation de commande. Les offres, particulièrement celles présentes dans des listes de prix, prospectus, etc. ne contenant aucun délai d'acceptation, sont sans engagement.
- 1.3 Les présentes conditions de livraison sont obligatoires si elles sont déclarées applicables dans l'offre ou dans la confirmation de commande. D'autres conditions différentes du mandant ne sont valides que si elles ont été expressément acceptées par écrit par le fournisseur.
- 1.4 Tous les accords et déclarations pertinentes des parties contractantes nécessitent la forme écrite pour être valables.
- 1.5 Si une disposition des présentes conditions de livraison s'avérerait en tout ou partie caduque, les parties contractantes remplaceront alors cette disposition par une disposition nouvelle se rapprochant le plus possible de l'objectif économique recherché.

## 2. Volume des livraisons et prestations

Les livraisons et les prestations du fournisseur sont indiquées dans la confirmation de commande, y compris les annexes éventuelles à celle-ci de manière limitative. Le fournisseur est autorisé à procéder à des modifications générant des améliorations dans la mesure où elles n'entraînent pas d'augmentation des prix.

## 3. Prospectus, catalogues et documents techniques

Sans accords ultérieurs, les prospectus et les catalogues n'ont pas de valeur contraignante. Les données des documents techniques ne sont obligatoires que si elles sont expressément garanties.

## 4. Prix

- 4.1 Tous les prix s'entendent - en l'absence d'un autre accord - nets, départ usine, sans emballage, en francs suisses librement disponibles, ou dans la devise nationale des filiales, sans déductions quelles qu'elles soient.
- 4.2 Tous les frais annexes, par exemple pour le fret, l'assurance, les autorisations d'exportation, d'importation, et autres autorisations ainsi que des certifications sont à la charge du mandant.
- 4.3 De même, le mandant doit supporter toutes les sortes d'impôts (en particulier la TVA), redevances, taxes, droits de douane et similaires qui sont prélevées en rapport avec le contrat, ou les rembourser au fournisseur contre un justificatif si celui-ci en a l'obligation de prestation.

## 5. Conditions de paiement

- 5.1 Le mandant doit effectuer les paiements conformé-

ment aux conditions de paiement convenues au domicile du fournisseur, sans déduction d'escompte, frais, impôts, redevances, taxes, droits de douane et similaires. L'obligation de paiement est remplie si le montant convenu a été mis à disposition du fournisseur au domicile du fournisseur. Le délai de paiement est de 30 jours à compter de la date de facturation.

- 5.2 Le délai de paiement ou les délais de paiement convenus séparément doivent aussi être respectés si le transport, la livraison ou l'acceptation de la livraison sont retardées ou rendues impossibles pour des motifs dont le fournisseur n'est pas responsable ou si des parties non essentielles manquent à la livraison ou si des travaux complémentaires s'avèrent nécessaires et rendent impossible l'utilisation de la livraison.
- 5.3 Si le mandant ne respecte pas le délai de paiement ou les délais de paiement convenus séparément, il doit, sans avertissement, à compter de la date d'échéance, indiquer un intérêt qui s'applique aux taux d'intérêt usuels au domicile du mandant, cependant au moins 4% au-dessus du taux d'escompte respectif de la banque nationale suisse. L'indemnisation d'autres préjudices reste réservée.

## 6. Réserve de propriété

- 6.1 Le fournisseur reste propriétaire de toutes ses livraisons jusqu'à ce qu'il ait reçu l'intégralité des paiements prévus au contrat.
- 6.2 Le mandant est tenu de coopérer à des mesures nécessaires à la protection de la propriété du fournisseur; en particulier, il donne les pleins pouvoirs au fournisseur, à la conclusion du contrat d'achat, pour réaliser, au frais du mandant, l'inscription ou la prénation de la réserve de propriété dans des registres ou des livres publics ou similaires conformément aux lois nationales concernées et pour effectuer toutes les formalités à cet égard.
- 6.3 Le mandant entretiendra les objets livrés à ses frais pendant la durée de la réserve de propriété et en faveur du Fournisseur, contre le vol, le bris, l'incendie, les inondations et d'autres risques. En outre, il prendra toutes les mesures afin que la prétention à la propriété du fournisseur ne soit ni affectée, ni infirmée.

## 7. Délai de livraison

- 7.1 Le fournisseur s'efforce de respecter le délai de livraison fixé dans la confirmation de commande. Le délai de livraison est respecté si l'avis de mise à disposition de l'envoi est envoyé au mandant jusqu'à son expiration.
- 7.2 Le respect du délai de livraison est la condition préalable de l'exécution totale des obligations contractuelles par le mandant.
- 7.3 Le délai de livraison se prolonge proportionnellement si des obstacles surviennent et que le fournisseur ne peut les écarter malgré la diligence requise, indépendamment du fait qu'ils surviennent chez lui, le mandant ou un tiers. De tels obstacles sont par exemple des épidémies, une mobilisation, une guerre, une insurrection,

- des accidents d'exploitation importants, des accidents, des conflits sociaux, un retard de livraison ou une livraison défectueuse des matières premières nécessaires et des produits semi-finis, des mesures prises par les autorités civiles ou des omissions ainsi que des phénomènes naturels.
- 7.4 Si, au lieu d'un délai de livraison, une date précise est convenue, celle-ci a la même signification que le dernier jour d'un délai de livraison. Les paragraphes 7.1 à 7.3 sont applicables de façon analogue.
- 7.5 En cas de retard de livraison, le mandant n'a aucun droit à des dommages-intérêts ou à d'autres prestations autres que celles qui sont expressément mentionnées dans ce paragraphe 7 ou stipulées dans un accord séparé. Cette restriction ne s'applique pas à une intention délictueuse ou à une négligence grave du fournisseur.
- 8. Reprise des marchandises**  
Pour des retours de marchandises usuels jusqu'à CHF 1000.–, nous devons imputer une réduction de 10% de la valeur de la marchandise, au minimum toutefois de CHF 30.– pour les dépenses de contrôle qui nous incombent. Pour des valeurs de reprise supérieures, il convient d'obtenir au préalable l'accord de FRAISA SA. Les réalisations spécifiques aux clients et les produits dotés d'inscriptions spéciales sont exclus de toute reprise.
- 9. Conditionnement**  
L'emballage est facturé séparément par le fournisseur et n'est pas repris.
- 10. Transfert des profits et des risques**  
10.1 Les profits et les risques sont transférés au mandant au plus tard au départ de la livraison départ usine.  
10.2 Si l'envoi est retardé à la requête du mandant ou pour d'autres motifs dont le fournisseur n'est pas responsable, le risque est transféré à la date prévue à l'origine pour la livraison départ usine. A partir de cette date, les livraisons sont stockées et assurées aux frais et aux risques du mandant.
- 11. Envoi, transport et assurance**  
11.1 Des souhaits spéciaux concernant l'expédition, le transport et l'assurance doivent être portés à la connaissance du fournisseur en temps voulu. Le transport est effectué aux frais et aux risques du mandant.  
11.2 Les réclamations relatives à l'expédition ou au transport doivent être adressées sans tarder par le mandant au dernier transporteur à la réception de la livraison ou des documents de fret.  
11.3 L'assurance couvrant les dommages de toute sorte doit être souscrite par le mandant.
- 12. Vérification et acceptation des livraisons**  
12.1 Le mandant doit vérifier les livraisons dans les huit jours suivant leur réception et informer le fournisseur par écrit des vices éventuels dans le même délai. S'il omet ceci, les livraisons sont réputées acceptées.  
12.2 Le fournisseur doit éliminer aussi rapidement que possible les vices indiqués conformément au paragraphe 12.1 - ou - selon son choix - remplacer les marchandises défectueuses.  
12.3 Le mandant n'a aucun droit et aucune prétention pour des vices de quelque sorte que ce soit sur les livraisons, autres que les droits et prétention expressément indiqués aux paragraphes 12 et 13 (Garantie, responsabilité en cas de vices).
- 13. Garantie, responsabilité en cas de vices**  
13.1 Le délai de garantie est de six mois. Il commence avec le départ des livraisons de l'usine. Pour les marchandises remplacées ou réparées, le délai de garantie commence à courir de nouveau et dure six mois à compter de l'envoi des marchandises de remplacement par le fournisseur. La garantie s'éteint précocement si le mandant ou des tiers entreprennent des modifications ou des réparations non conformes ou si le mandant, en cas de survenue d'un vice, ne prend pas immédiatement toutes les mesures adaptées pour atténuer ce dommage et ne donne pas l'opportunité au fournisseur d'éliminer le vice.  
13.2 Sont exclus de la garantie et de la responsabilité du fournisseur les dommages survenus de façon non démontrable en raison d'un mauvais matériau, d'une conception défectueuse ou d'une exécution défectueuse, par exemple suite à une usure naturelle, un entretien défectueux, un non-respect des instructions de service, une utilisation excessive, un consommable inadapté, des influences chimiques ou électrolytiques ainsi que pour d'autres motifs dont le fournisseur n'est pas responsable.  
13.3 Le mandant a exclusivement droit à un dédommagement ou une réparation des marchandises défectueuses. Le mandant n'a pas droit à d'autres prétentions, particulièrement à une indemnisation des dommages ou des dommages consécutifs aux défauts. En aucun cas le mandant ne peut prétendre à la réparation de dommages non survenus sur l'objet même de la livraison, notamment une interruption de la production, des pertes d'exploitation, une perte de commandes, un manque à gagner, ainsi que d'autres dommages directs ou indirects. L'exclusion de responsabilité ne s'applique pas à une intention délictueuse ou une négligence grave du fournisseur. Du reste, cette exclusion de responsabilité ne s'applique pas dans la mesure où un droit coercitif s'y oppose.
- 14. Juridiction et droit applicable**  
14.1 La juridiction pour le mandant et le fournisseur est le siège social du fournisseur. Ce dernier est cependant autorisé à poursuivre en justice le mandant à son domicile.  
14.2 La relation juridique est exclusivement soumise au droit du commerce national du fournisseur. Les dispositions de la Convention des Nations Unies sur les contrats de vente internationale de marchandises ne s'appliquent pas.

## Points de vente et de service

### Fraisa SA

Gurzelenstrasse 7  
4512 Bellach
