## Outils de **perçage et de filetage**

# Outil de perçage XDrill®

- **Outil de perçage haute performance pour l'usinage des matières en acier**  
Convient parfaitement à des aciers jusqu'à  $R_m 1\,500\text{ N/mm}^2$
- **Durée de vie nettement supérieure pour des valeurs d'avance et des vitesses de coupe accrues**  
Grâce à une géométrie de coupe particulièrement stable, un carbure à grain ultrafin et un revêtement haute dureté
- **Nano-revêtement multicouches en carbure résistant à l'usure DURO-X**  
Sécurité de processus élevée grâce au revêtement résistant aux températures, spécialement sélectionné pour l'usinage haute performance
- **Diminution de la durée de traitement jusqu'à plus de 50 %**

XDRILL®

# Outil de perçage Supradrill® U

- **Usinage universel des matières en acier**  
Perçage avec sécurité de processus dans l'acier ordinaire ou inoxydable
- **Large gamme pour un vaste éventail de pièces et d'applications**  
La gamme de base comprend 3 x D (avec arrosage central),  
5 x D IKZ (avec ou sans arrosage central)
- **Revêtement haute performance Nano-U<sup>2</sup>**  
Le revêtement le plus performant pour le perçage universel dans l'acier
- **Sécurité de processus renforcée, durée de vie prolongée  
et réduction des coûts de fabrication**  
Grâce au concept de revêtement conçu à cet effet et à la conception  
adaptée de l'arête de coupe suivant les dimensions

SUPRADRILL® U

# Taraud x-tap

- **Taraud pour l'usinage haute performance de l'acier ordinaire et inoxydable**
- **Sécurité de processus élevée, couple mécanique faible et durée de vie élevée**
- **De nombreux types de filets disponibles pour un large éventail d'applications**  
Sélection sûre des outils et des données d'utilisation grâce à un système de codage
- **Revêtement de matière dure TRIBO**  
Pour l'usinage avec sécurité de processus de l'acier inoxydable

X-TAP

# Taraud s-tap

- **La nouvelle référence en matière de performance pour le taraudage universel de l'acier**
- **Sécurité de processus et durée de vie élevées, automatisation sécurisée**  
Grâce au nouveau substrat, au procédé d'égavurage, au conditionnement spécifique aux dimensions de l'arête de coupe et au revêtement haute performance TiCN
- **Large gamme de base métrique et filetages gaz**  
Pour l'usinage de l'acier, même dans la plage de résistance inférieure
- **Rigid tapping et compensation de longueur**

S-TAP

# Taraud u-tap

- **Taraud pour une utilisation universelle**
- **Usinage de différentes matières à l'utilisation des toutes dernières technologies**  
Adapté à l'acier ordinaire ou inoxydable et aux alliages d'aluminium corroyés
- **Sécurité de processus élevée et diminution des coûts de fabrication**  
Grâce à une conception optimisée de l'arête de coupe et à une aptitude à l'emploi universelle

U-TAP

## 90°

Technical drawing of a drill bit. The drawing shows a cylindrical body with a diameter  $d_2$  and a total length  $l_1$ . The tip of the drill bit has a diameter  $d_1$  and a cutting angle of  $90^\circ$ .

144°

Technical drawing of a drill bit. The drawing shows a cylindrical body with diameter  $d_2$  and length  $l_1$ . The tip of the drill bit has a diameter  $d_1$  and a cutting angle of  $144^\circ$ .

Incool

M

A diagram of a house-shaped polygon. The top part is a triangle with a vertex angle of  $60^\circ$ . The base of this triangle is the top edge of a rectangle. The rectangle has a height of 10 units. The total width of the house is 10 units, which is the same as the base of the triangle.

**HM  
MG10**

A cross-sectional diagram of a butt joint. Two plates, represented by diagonal hatching, are joined by a square groove weld. The weld metal is shown as a solid white area filling the square groove and extending slightly beyond the edges of the plates.

Form C

M

**Al**  
Aluminium  
Cast

**Cu**  
Copper
